

### Flowmeter SITRANS FUS380 standard

#### Overview

The 2-track flowmeter SITRANS FUS380 comes as battery or mains-powered and is designed to measure water flow in district heating plants, local networks, boiler stations, substations, chiller plants and other general water applications.

The type-approved flowmeter version is named SITRANS FUE380 - see page 4/256.

Technically, the meter types SITRANS FUS380 and SITRANS FUE380 are completely identical, only difference is the calibration limit and the type approval for custody transfer.

#### Design

The 2-track design of SITRANS FUS380 ensures maximum accuracy under short inlet conditions. The flowmeter consists of a flow sensor pipe, 4 transducers/transducer cables and a transmitter SITRANS FUS080.

The unit is available in a compact or a remote version with up to 30 meter distance from flowmeter to transmitter. When ordering a compact version the transducer cables are pre-mounted and ready for installation.

Compact mounting is only possible up to 120 °C (248 °F). The sensor must be isolated to protect transmitter from heat. The transmitter is available in an IP67/NEMA 4X/6 enclosure.

#### Integration

The flowmeter digital output is often used as input for an energy meter or as input for digital systems for remote reading.

SITRANS FUS380 has two digital output functions that can be individually selected, and optional Modbus RTU communication modules.

Pulse output rate is defined when ordering.

If the flowmeter forms part of an energy meter system for custody transfer, no further approvals are needed, except possible local approvals on the flowmeter.

#### Benefits

- Battery-powered up to 6 years
- 115/230 V mains-powered with back-up battery option in case of mains power failure
- Fast measuring frequency 20 Hz/0.5 Hz (230 V AC/Battery)
- Easy one-button straight forward display
- 2-track measuring principle for optimum accuracy
- Compact or remote mounting
- Measures on all district water qualities and water conductivities
- No pressure drop
- Long-term stability
- 2 galvanically isolated digital outputs for easy connection to a calculator (potential-free)
- Bidirectional measurement, with 2 totalizers and outputs
- Dynamic range  $Q_j$  (min) :  $Q_s$  (max) up to 1:400
- Modbus RTU/RS 232, RS 485

#### Application

The main application for SITRANS FUS380 is measurement of water flow or water flow in energy meter systems in district heating networks or chilled water.

1200	36 000	37 800	18 000	180	90.000	0.24	100

The values  $Q_i$ ,  $Q_p$  and  $Q_s$  are shown on the system label of the FUS380.  $Q_i$  ( $Q_{\min}$ ) means the minimal and  $Q_p$  ( $Q_{\text{nom}}$ ) the nominal flow rate.  $Q_s$  is the highest operable flow rate. The maximum flow rate ( $Q_{\max}$ ) is 105% of  $Q_s$ . The low flow cut-off is 50 % of  $Q_i$ .

In order to obtain best pulse output resolution in the range  $Q_{\min}$  to  $Q_s$  of approx. 100 Hz at  $Q_s$ , two or three flow values for every dimension can be selected at ordering. Therefore the ordering data table also shows  $Q_p$  ( $Q_n$ ). This flow rate is between  $Q_i$  ( $Q_{\min}$ ) and  $Q_s$  and indicates the normal or typical flow.

<sup>1)</sup> Typical pulse values for SITRANS FUS380. Other pulse values are possible - see Selection and Ordering data table.

DN 1200: <ul style="list-style-type: none"> <li>• Compact: 2 ... 120 °C (35.6 ... 248 °F)</li> </ul>
Degree of protection	Sensor connection IP67/NEMA 4X/6
Max. flow velocity	DN 50 ... DN 1200: 9 m/s (29.5 ft/s)
Electromagnetic compatibility	
• Emitted interference	To EN 61000-6-4
• Noise immunity	To EN 61000-6-2
<b>Transmitter</b>	
<b>The transmitter related to this system is the SITRANS FUS080. Technical specifications to the FUS080 see page 4/219 ff.</b>	
<b>Sensor cable</b>	
Cable length	Max. 30 m (98.4 ft) between transmitter and sensor
<b>Certificates and approvals</b>	
Conformity certificate	The devices are supplied as standard with a Siemens Certificate of Conformity on CD
Material certificate	Material certificate according EN 3.1 is optionally available
Calibration report	A standard calibration report is shipped with every flowmeter. Extended accredited ISO/IEC 17025 calibration certificates optionally available
Approvals	No custody transfer approvals

#### **SITRANS FUS380 uncertainty**

	<b>FUS380</b>
Flow value setting	Predefined settings according to dimension
Approval	No approval
Flow rate $v_f$	0.02 ... 9 m/s (0.065 ... 29.5 ft/s)
Output A	Pulse: forward, reverse, forward net, reverse net (Preset: forward)
Output B	Pulse (forward, reverse, forward net, reverse net, alarm, call-up (Preset: alarm))
Pulse value A & B (depending on DN value)	0.1 l/p, 0.25 l/p, 0.5 l/p, 1 l/p, 2.5 l/p, 10 l/p, 25 l/p, 50 l/p, 100 l/p, 250 l/p, 500 l/p, 1 m <sup>3</sup> /p, 2.5 m <sup>3</sup> /p, 5 m <sup>3</sup> /p, 10 m <sup>3</sup> /p, 25 m <sup>3</sup> /p, 50 m <sup>3</sup> /p, 100 m <sup>3</sup> /p, 250 m <sup>3</sup> /p, 500 m <sup>3</sup> /p, 1000 m <sup>3</sup> /p
Pulse width	5/10/20/50/100/200/500 ms
Flow unit setup	Preset: m <sup>3</sup> /h
Volume unit setup	Preset: m <sup>3</sup>

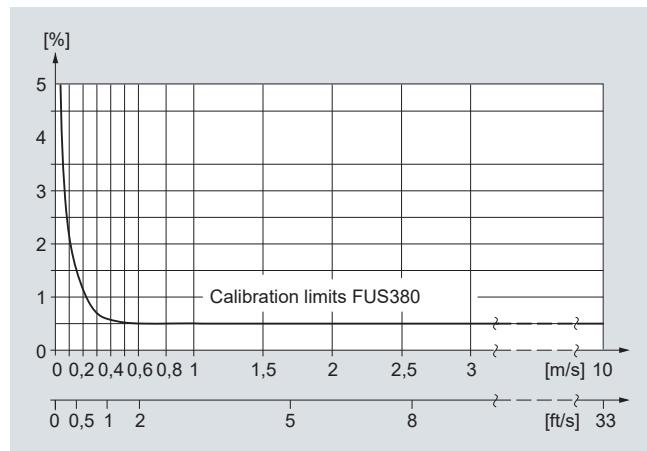

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens flow facilities accredited according to ISO/IEC 17025 by DANAQ or UKAS.

The accreditation bodies DANAQ and UKAS have signed the ILAC MRA agreement (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement). Therefore the accreditation ensures international traceability and recognition of the test results in 39 countries worldwide, including the US (NIST traceability).

A standard calibration certificate with  $Q_n$  as selected flow is shipped with each SITRANS FUS380. This production calibration protocol consists of 2 x 3 points at  $Q_i$ , 10%  $Q_p$  and  $Q_p$  (max. 4 200 m<sup>3</sup>/h).

#### **Accuracy SITRANS FUS380:**

Standard calibration: Better than 0.5% of rate, 0.5 m/s <  $v$  < 8 m/s  
 $v$  < 0.5 m/s, 0.5 + 0.25/v [%]

#### MLFB Ordering example

Customer requires a flowmeter:

- DN 250, PN 25, compact version (media temperature max. 120 °C (248 °F)), mains power version.
- Material certificate and metal tag name plate.
- Pulse output for 10 l/pulse and min. 5 ms pulse width.

#### Ordering:

# Flow Measurement

## SITRANS F US Inline

### Flowmeter FUE380 with approval

#### Overview

The 2-track flowmeter SITRANS FUE380 comes as battery or mains-powered and is designed to measure water flow in district heating plants, local networks, boiler stations, substations, chiller plants and other general water applications.

The flowmeter FUE380 is approved according to energy meter standards EN 1434 class 2, OIML R 75 class 2 and MID class 2. Metrological parameters are protected against manipulation. The type-approved flowmeter version is named SITRANS FUE380. For a standard flowmeter type FUS380 without a type approval, see separate FUS380 chapter.

Technically, the meter types SITRANS FUS380 and SITRANS FUE380 are completely identical, only difference is the calibration limit and the type approval for custody transfer.

#### Benefits

- Battery-powered up to 6 years
- 115/230 V mains-powered with back-up battery option in case of mains power failure
- Fast measuring frequency 20 Hz/0.5 Hz (230 V AC/Battery)
- Easy one-button straight forward display
- 2-track measuring principle for optimum accuracy
- Compact or remote mounting
- Measures on all district water qualities and water conductivities
- No pressure drop
- Long-term stability
- 2 galvanically isolated digital outputs for easy connection to a calculator (potential-free)
- Bidirectional measurement, with 2 totalizers and outputs
- Dynamic range  $Q_i:Q_p$  up to 1:50/100 or max. range  $Q_i:Q_s$  up to 1:400
- Modbus RTU/RS 232, RS 485

#### Application

The main application for SITRANS FUE380 is measurement of water flow or water flow in energy meter systems for custody transfer in district heating networks or chilled water.

Combined with an energy calculator and a pair of temperature sensors, SITRANS FUE380 can be used as part of an energy meter system. For this purpose Siemens offers energy calculator SITRANS FUE950.

#### Design

The 2-track design of SITRANS FUE380 ensures maximum accuracy under short inlet conditions. The flowmeter consists of a flow sensor pipe, 4 transducers/transducer cables and an approved transmitter SITRANS FUE080.

The unit is available in a compact or a remote version with up to 30 meter distance from flowmeter to transmitter. When ordering a compact version the transducer cables are pre-mounted and ready for installation.

Compact mounting is only possible up to 120 °C (248 °F). The sensor must be isolated to protect transmitter from heat. The transmitter is available in an IP67/NEMA 4X/6 enclosure.

#### FUE380 MI-004 approval

The SITRANS FUE380 program is type-approved according to international energy meter standard EN1434. On 1 November 2006 the MI-004 energy meter directive became effective providing that all energy meters with a MI-004 verification label can be sold across the EU borders.

The FUE380 are MI-004 verified and labeled products according to Directive 2004/22/EC of the European Parliament and Council of March 31, 2004 on measuring instruments (MID), Annex MI-004 in sizes from DN 50 to DN 1200.

The MID certification is obtained as module B + module D approvals according to the above-mentioned directive.

Module B: Type approval according to EN1434: 2006

Module D: Quality insurance approval of production

The MID system label with the approval information is placed on the side of the transmitter and on the sensor. An example of the product label is shown below:

## Integration

The flowmeter digital output is often used as input for an energy meter or as input for digital systems for remote reading.

SITRANS FUE380 has two digital output functions that can be individually selected, and optional Modbus RTU communication modules.

Pulse output rate is defined when ordering.

If the flowmeter forms part of an energy meter system for custody transfer, no further approvals are needed, except possible local approvals on the flowmeter.

## Configuration SITRANS FUE380 type-approved

### Selection guide SITRANS FUE380, type-approved flowmeter

1200	25 200	26 460	18 000 <sup>3)</sup>	-	180.00	90.000	0.34	100

Dynamic range  $Q_i:Q_p$ : better than 1:100 or 1:50 according to EN 1434, OIML R 75 class 2 and MID class 2.

$Q_i$  ( $Q_{\min}$ ) means the minimal and  $Q_p$  ( $Q_{\text{nom}}$ ) the nominal flow rate according to the approval requirements.

$Q_s$  is the highest operatable flow rate. The maximum flow rate ( $Q_{\max}$ ) is 105 % of  $Q_s$ . The low flow cut-off is 50 % of  $Q_i$ .  $Q_i$ ,  $Q_p$  and  $Q_s$  are shown on the system label of the FUE380.

In order to obtain best pulse output resolution in the range  $Q_{\min}$  to  $Q_s$  of approx. 100 Hz at  $Q_s$ , two or three flow values for every dimension can be selected at ordering. Therefore the ordering data table also shows  $Q_p$  ( $Q_n$ ). This flow rate is between  $Q_i$  ( $Q_{\min}$ ) and  $Q_s$  and indicates the normal or typical flow according to the approval requirements.

<sup>1)</sup> In connection with SITRANS FUE950 - other pulse values - see Selection and Ordering data table.

<sup>2)</sup> EN 1434 and MID flow values

<sup>3)</sup> OIML R 75 and MID flow values

<sup>4)</sup> The minimum flow ( $Q_i$ ) should be checked in the PIA-selector or product master data base (PMD)

DN 1200: <ul style="list-style-type: none"> <li>• Compact: 2 ... 120 °C (35.6 ... 248 °F)</li> <li>• MID: min. +15 °C/+59 °F</li> </ul>
Degree of protection	Sensor connection IP67/NEMA 4X/6
Electromagnetic compatibility	
<ul style="list-style-type: none"> <li>• Emitted interference</li> <li>• Noise immunity</li> <li>• MID</li> </ul>	
Max. flow velocity at Q <sub>s</sub>	DN 50 ... DN 1200: 9 m/s (29.5 ft/s)

#### **Transmitter**

The transmitter related to this system is the SITRANS FUE080.

Technical specifications to the FUE080 see page 4/219 ff.

#### **Sensor cable**

Cable length	Max. 30 m (98.4 ft) between transmitter and sensor
--------------	--

#### **Certificates and approvals**

Conformity certificate	The devices are supplied as standard with a Siemens Certificate of Conformity on CD
Material certificate	Material certificate according EN 10204-3.1 is optionally available
Calibration report	A standard calibration report is shipped with every flowmeter. Extended accredited ISO/IEC 17025 calibration certificates optionally available
Approvals	<ul style="list-style-type: none"> <li>• EN 1434 and OIML R 75 Class 2 (PTB approval based on EN1434)</li> <li>• MID class 2 approval and certification</li> </ul>

#### **Type-dependent settings**

Flow value	Predefined according to EN 1434 / OIML R 75 / MID
Approval	Country specific
Flow rate v <sub>f</sub>	0.02 ... 9 m/s (0.065 ... 29.5 ft/s)
Output A	Preset: Forward pulses
Output B	Preset: Alarm
Pulse value A & B (depending on DN value)	Preset: See scheme - previous page Preset for SITRANS FUE950 or free selectable depending on flow rate (Q <sub>s</sub> )
Pulse width	Preset: 5 ms
Flow unit setup	Preset: m <sup>3</sup> /h
Volume unit setup	Preset: m <sup>3</sup>

#### **SITRANS FUE380 uncertainty**

To ensure continuous accurate measurement, flowmeters must be calibrated. The calibration is conducted at Siemens flow facilities accredited according to ISO/IEC 17025 by DANAk or UKAS.

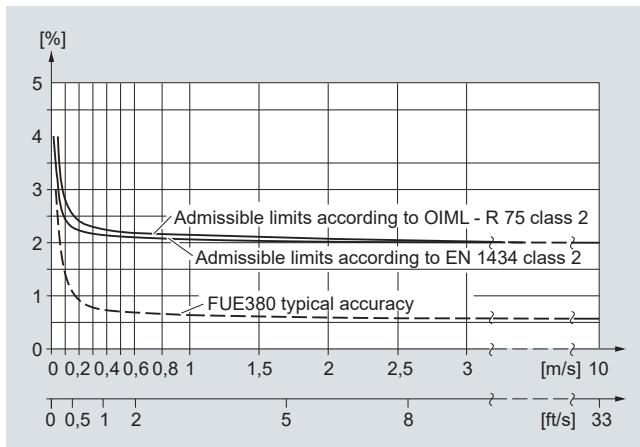

The accreditation bodies DANAk and UKAS have signed the ILAC MRA agreement (International Laboratory Accreditation Corporation - Mutual Recognition Arrangement). Therefore the accreditation ensures international traceability and recognition of the test results in 39 countries worldwide, including the US (NIST traceability).

A standard calibration certificate with Q<sub>n</sub> as selected flow is shipped with each SITRANS FUS380. This production calibration protocol consists of 2 x 3 points at Q<sub>i</sub>, 10% Q<sub>p</sub> and Q<sub>p</sub> (max. 4 200 m<sup>3</sup>/h).

#### **Typical accuracy SITRANS FUE380:**

$\pm(0.5 + 0.02 Q_p/Q) [\%]$   
Q<sub>p</sub> according to EN 1434/OIML requirements.

Example: DN 100, Q<sub>p</sub> = 60 m<sup>3</sup>/h at Q = 1.2 m<sup>3</sup>/h:  
Accuracy at 1.2 m<sup>3</sup>/h = typical 1.5 %

SITRANS FUE380 fulfills the requirements  
E<sub>f</sub> =  $\pm(2 + 0.02 Q_p/Q_i)$  max.  $\pm 5\%$ , according to EN 1434 and OIML R 75, class 2 or MID class 2 requirements.

<sup>1)</sup>  $Q_p$  ( $Q_n$ ) is the normal flow according to the approval requirements.  $Q_p$  and  $Q_n$  is shown on the system label.

<sup>2)</sup> Pipe material bronze brass

<sup>3)</sup> EN 1434 flow values. The minimum flow ( $Q_i$ ) should be checked in the PIA-selector or product master data base (PMD).

<sup>4)</sup> OIML R 75 flow values

<sup>5)</sup> PN 40 standard for DN 50 ... DN 80 die-cast bronze pipes

<sup>6)</sup> Lithium batteries are subject to special transportation regulations according to United Nations "Regulation of Dangerous Goods, UN 3090 and UN 3091". Special transport documentation is required to observe these regulations. This may influence both transport time and costs.

<sup>7)</sup> Other countries in progress

<sup>8)</sup> In Europe the MID approval is the standard, please use following selections.

Please also see [www.siemens.com/SITRANSordering](http://www.siemens.com/SITRANSordering) for practical examples of ordering.

### MLFB Ordering example

Customer requires a flowmeter for custody transfer:

- DN 250, PN 25, compact version (media temperature max. 120 °C), battery version.
- Type-approved according to MID (EN 1434), verified and sealed, type label in German.
- Material certificate and metal tag name plate.
- Pulse output for energymeter SITRANS FUE950.

### Ordering:

FUE380: **7ME3410-2LD05-4DS2-Z, F10, Y17**

Example of appropriate energy meter (see the following chapter):

Energy meter type: **7ME3470-3AA36-0DD2-Z, E02**
