

## Overview

SITRANS LCS100 is a point level switch that detects point level in liquids, solids, slurries, foam, and interface detection. Its compact design is ideal for confined spaces with plastic or stainless steel process connections and flexible rod and cable probe extensions. SITRANS LCS100 is used for overflow, high, low, and demand applications as well as pump protection. It works in all types of vessels, pipes, and silos in a broad range of industries including food, pharmaceuticals, chemical, petrochemical, water, and machine building.

## Benefits

- Potted construction provides protection from shock and vibration
- Factory calibrated to work in most applications without tuning
- Active shield and tunable to compensate for build-up
- Optional IO-link communication and remote testing
- Options for plastic or Stainless steel enclosure and M12 connection

## Application

SITRANS LCS100's flexible insertion length, starting at 92 mm (3.6 inch), and its versatility in various applications and in vessels or pipes make it a good fit for most point level applications.

Its advanced design provides accurate, repeatable, switchpoint performance. The PPS (Polyphenylene sulfide) probe [optional PVDF (Polyvinylidene Fluoride)] and optional peek are chemically resistant with an effective process operating temperature range from -40 to +125 °C (-40 to +257 °F). The fully potted design ensures reliability in a vibrating environment such as agitated tanks. When used with a SensGuard protection cover, the LCS100 is protected from shearing, impact, and abrasion in tough primary processes.

The SITRANS LCS100 is available with either a stainless steel enclosure or a polyester enclosure and stainless steel or PPS process connection options.

- Key Applications: liquids, slurries, powders, granules, food and pharmaceuticals, chemicals, hazardous areas

## Configuration

### Probe distance

- Observe nozzle length (probe should lead into the product).
- Observe minimum distance between two probes, and to the metal vessel wall.

### Correct

Probe leads into the product

### Wrong

Nozzel too long

SITRANS LCS100 Installation, dimensions in mm (inch)

## SITRANS LCS100

## Circuit diagrams

**2-wire operation with 8/16 mA loop**

8/16 mA loop: 9 .. 33 V DC,  
0,7W incl. 10% of EN 61010-1

External resistor in loop: The  
above stated voltage is the  
resulting voltage on the unit.  
Any voltage drop on an external  
series resistance must be  
considered.

$$R_{\max} = (V_{\text{supply}} - 9 \text{ V}) / 16 \text{ mA}$$

Example: 24 V supply allows  
R<sub>max</sub> of 938 Ohms

**4-wire operation with DC supply and relay (signal output)**

Power supply: 9 .. 33 V DC,  
0,7W incl. 10% of EN 61010-1

Signal output: Floating relay SPST

Max. 60 V DC or 30 V AC; Limited to  
35 V DC or 16 V AC in wet locations  
Max. 1 A, 60 W

External fuse: max.1A, fast or  
slow, HBC, 250V

SITRANS LCS100, Standard connections

## SITRANS LCS100

## Circuit diagrams (continued)

**Intrinsically safe version: 2-wire operation with 8/16 mA loop**

8/16 mA loop: 10.8 .. 30 V DC,  
0,7W incl. 10% of EN 61010-1

Intrinsically safe supply required  
(barrier or signal conditioning  
instruments):  $U_i=30\text{ V}$   $I_i=160\text{ mA}$   
 $P_i=0,8\text{ W}$ ,  $C_i=7,6\text{ nF}$   $L_i=0,3\text{ mH}$

External resistor in loop: The above  
stated voltage is the resulting voltage on the unit.  
Any voltage drop on an external series resistance  
must be considered.

$$R_{\max} = (V_{\text{supply}} - 10.8\text{ V}) / 16\text{ mA}$$

Example: 24 V supply allows  
 $R_{\max}$  of 825 Ohms

**Intrinsically safe version: 4-wire operation with DC supply and solid state relay (signal output)**

This operation is only available for LCS100 compact  
with enclosure  $\varnothing 65\text{ mm}$  (2.56 inch) and connection via  
terminal block (Solid state relay integrated).

Power supply: 10.8 .. 30 V DC, 0,7W incl. 10% of  
EN 61010-1

Intrinsically safe barrier required:  $U_i=30\text{ V}$   $I_i=160\text{ mA}$   
 $P_i=0,8\text{ W}$ ,  $C_i=7,6\text{ nF}$   $L_i=0,3\text{ mH}$

Signal output: Solid state relay

Max. switching voltage / current: 30 V DC / 82mA

For connection to an intrinsically safe "switch amplifier  
for contact input" or to an intrinsically safe PLC  
with integrated input card for contact input.  
 $U_i=30\text{ V}$   $I_i=200\text{ mA}$   $P_i=350\text{ mW}$ ,  $C_i=4,2\text{ nF}$ ,  $L_i=0$
